Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS	THINKS
Needs accurate flood predictions to issue timely warnings.	Which machine learning model provides the most accurate flood predictions?
Current flood warning systems are often delayed or inaccurate.	Early predictions can reduce damage to lives and property.
Requires reliable data to support emergency response decisions.	Real-time weather and river data can improve prediction accuracy.
DOES	FEELS
Monitors rainfall, river water levels, and weather forecasts.	Concerned about public safety during heavy rainfall.
Issues alerts and coordinates with emergency response teams.	Responsible for minimizing loss of life and property.
Uses historical flood data to prepare disaster management plans.	Confident that AI-based flood prediction can improve disaster preparedness.
