Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

DFD Symbol	Component	Description
External Entity	User (Resident / Disaster Management Officer)	Enters flood-related parameters and receives prediction results.
Process 1.0	Receive User Input	Collects rainfall, water level, humidity, temperature, and other inputs.
Process 2.0	Data Preprocessing	Cleans, validates, and scales the input data before prediction.
Data Store	Flood Dataset	Stores historical flood and weather data used for model training.
Process 3.0	ML Prediction Model	Predicts the flood risk using the trained machine learning model.
Data Store	Prediction Results	Stores the generated flood prediction results.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.

Example:
