

Project Executable Files

Date	15 March 2026
Team ID	
Project Name	Rising Water
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example)	No
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
Rising_Waters/
|
|— app.py
|— train_model.py
|— predict.py
|— requirements.txt
|— README.md
|
|— dataset/
|   └─ flood.csv
|
|— models/
|   └─ flood_model.pkl
|   └─ scaler.pkl
|
|— notebooks/
|   └─ FloodPrediction.ipynb
|
|— templates/
|   └─ index.html
|   └─ result.html
|   └─ about.html
|
|— static/
|   └─ css/
|   └─ js/
|   └─ images/
|
|— utils/
|   └─ preprocessing.py
|   └─ prediction.py
|   └─ visualization.py
|
└─ tests/
    └─ test_prediction.py
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	
Login Credentials (Demo)	[Provide demo username and password for evaluator access]
Platform / Hosting Provider	[e.g., Render, Vercel, AWS, Heroku, Azure]
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

- Clone the repository:

```
git clone https://github.com/your-username/Rising-Waters.git
```
- Navigate to the project folder:

```
cd Rising-Waters
```
- Install the required dependencies:

```
pip install -r requirements.txt
```
- Start the Flask application:

```
python app.py
```
- Open your web browser and visit:

```
http://127.0.0.1:5000
```
- Enter flood-related parameters and click **Predict** to view the flood risk prediction.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Real-time weather API is not integrated.	Future enhancement.
2	Prediction accuracy depends on the quality and size of the dataset.	Can be improved by using larger and more diverse datasets.

S.No	Known Issue / Limitation	Workaround / Status
3	The application currently supports only a Flask web interface and is not optimized for mobile devices.	Mobile application development is planned as a future enhancement.
